# WIN-911
powered by SmartSights

GAIN VALUABLE INSIGHTS INTO YOUR PLANT'S HEALTH FROM ANYWHERE AT ANY TIME

Easily maintain all your operations across all of your locations from anywhere. SmartSights' WIN-911 Notifications is the ultimate solution to monitor your plant's health and turn alarm and operational management into actionable insights.

NEW RELEASE:
SMART ALARMS WITH WIN-911 2023

WIN-911 2023 is a smarter and more intuitive user experience all around.

This latest release features the new Control Center and offers enhanced dispatcher functionality, so you can focus on growing your business operation. WIN-911 2023 comes with improved performance, remote access for multiple installations, bypass options, and additional notification enhancements as part of the control center.
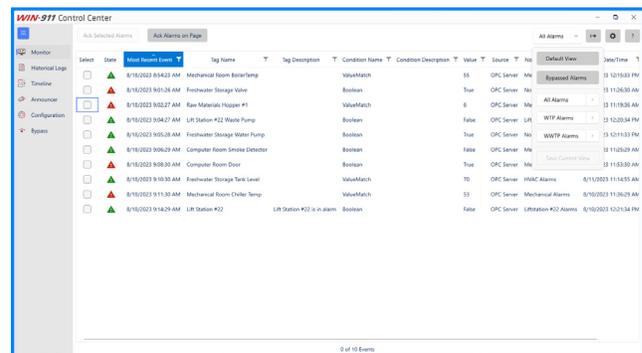

NEW CONTROL CENTER

With WIN-911 2023's upgraded features and advanced capabilities, this Control Center sets a new standard in efficiency and reliability.

Networkable Alarms

ACCESS AND RUN THE CONTROL CENTER REMOTELY

With network access to your WIN-911 system, there are no more limitations or boundaries — stay connected and in control wherever you are.

## Support ALL WIN-911 SCADA Alarms

MULTIPLE LOCATIONS – ONE CONTROL CENTER

Support multiple WIN-911 systems simultaneously. Now you can consolidate alarms from different systems into one centralized interface, eliminating the need for multiple logins and increasing your productivity.
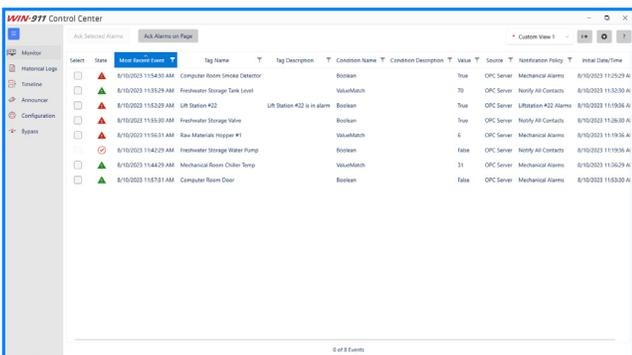

INSIGHTFUL MONITOR VIEW

The Monitor View takes real-time alarm monitoring to the next level. Gone are the days of manually polling the SQL alarm log — now you can see live alarms as they happen, providing faster response times and more detailed information at your fingertips.

Real-Time Alarm Monitoring

Alarm Management Filters

SAVED FILTERS = SAVED TIME

Users can now easily display specific subsets of alarms based on their preferences, allowing for focused monitoring without distractions.
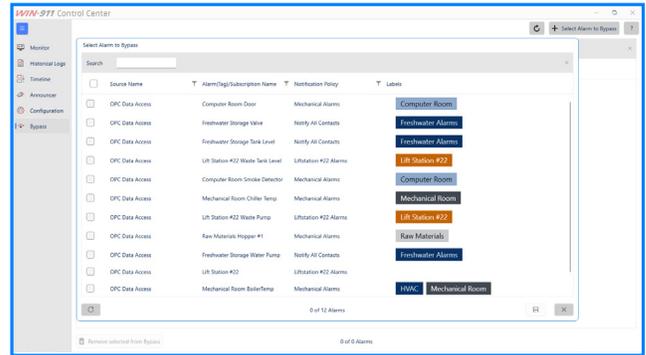

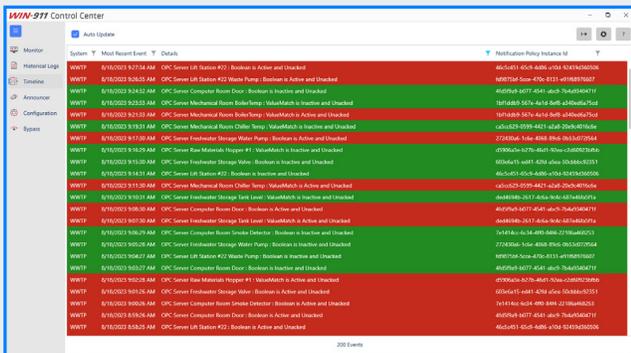

ALARM BYPASS – RECEIVE ALARMS WHEN YOU NEED TO

The Bypass function offers another level of flexibility by enabling users to temporarily silence individual alarms or subscriptions. Whether it's during maintenance activities or other planned events, this feature allows you to exclude certain tags from triggering notifications for a specified duration. Initially available for OPC Data Access, iFIX, and InTouch, this functionality ensures that you receive only essential alarms when it matters most.

Bypass for Maintenance

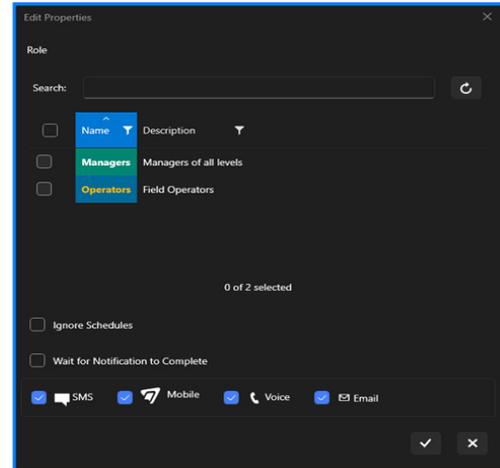

Alarm Log Viewer

EASILY ACCESSIBLE TIMELINE OF EVENTS

Effortlessly navigate through the streamlined interface to monitor real-time alarm updates with ease. The enhanced design allows for quick identification of alarming events, providing you with valuable insights into your system's performance.

ENHANCE YOUR DISPATCHING PROCESS

A key addition is the new Renotify option, which now honors schedules. In situations where a terminal is set to Restart Callout List for Any State Change, this new option provides an alternative action by triggering renotification while still adhering to schedules. This ensures that critical alarms are promptly addressed without disrupting predefined routines.

Additionally, we have integrated the Schedule Column into Callout Lists for improved visibility and management. This feature allows you to easily access all scheduled events within your callout lists, enabling efficient monitoring and response. Stay one step ahead by effortlessly tracking upcoming alarms and maintaining optimal operational performance.

ABOUT SMARTSIGHTS

SmartSights, a global leader in data-driven analytics, reports, and notifications, empowers industrial operations with clear insights for effective decision-making and action. By providing comprehensive visibility into critical infrastructure management, SmartSights enables swift problem resolution, waste reduction, and cost efficiencies, elevating operational performance significantly.

This elevated operational intelligence is the result of the synergy between WIN-911 and SyTech, two industry powerhouses who joined forces to create SmartSights, delivering impactful, data-driven solutions in a dynamic business environment.
