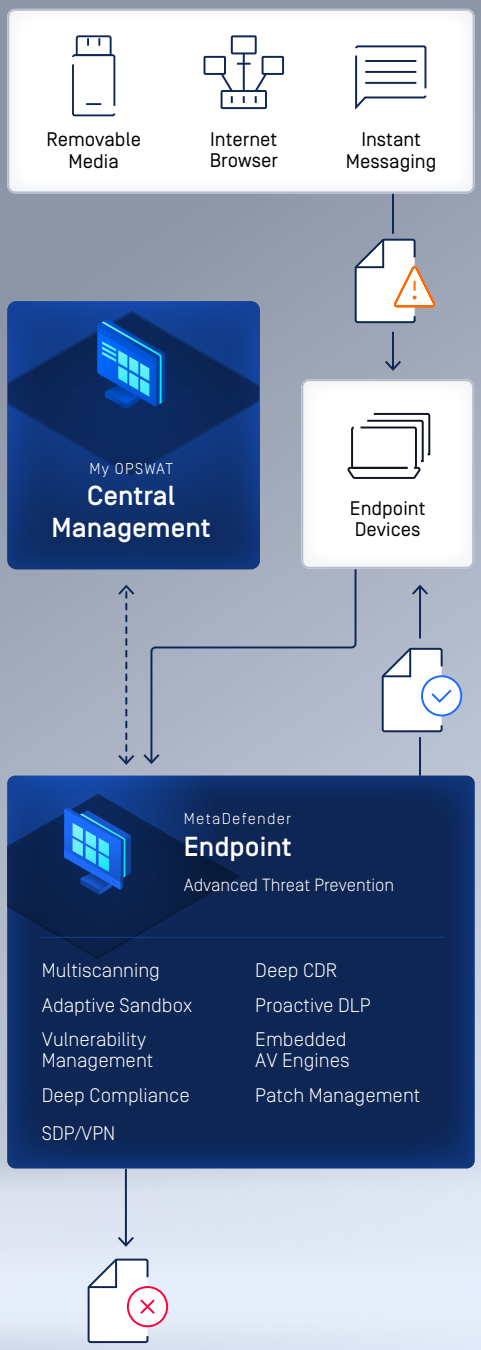
DATASHEET

METADEFENDER™

# Endpoint

## Seamless Defense Against Peripheral and Removable Media Threats

Traditional endpoint protection solutions, including single antivirus engines and dedicated device control tools, fall short of providing adequate protection against evolving threats. With advanced threat prevention technologies, including MetaScan™ Multiscanning and Deep CDR™ to scan and sanitize files, MetaDefender Endpoint secures assets from peripheral and removable media-borne threats and enables monitoring and auditing of usage in alignment with your organization's security and compliance standards. MetaDefender Endpoint additionally scans files downloaded from the internet.



**Your First 500 Scans Are On Us**

Download a fully functioning trial valid for 500 scans.

MetaDefender Endpoint provides a layer of security for your assets to protect devices from the threats presented by removable media.

# Key Features

**Peripheral Media Protection**
Scan peripheral media before they are made accessible and only grant permission for those with no detected threats.

**BadUSB Protection**
Safeguard endpoints from malicious removable media threats, including BadUSB, rubber ducky, and other USB-based attacks.

**Peripheral Device Control**
Monitor and manage all ports and connected media with full visibility.

**Patch & Vulnerability Management**
Detect vulnerabilities in 900+ applications with recommended fixes, enable patching for 1100+ third-party applications and OS updates, manage unwanted applications and ensure system compliance.

**Download Protection**
Scan files downloaded from web browsers and instant messaging apps to ensure they are malware-free.

**Advanced Malware Prevention**
Detect over 99% of known malware by scanning with 30+ leading anti-malware engines simultaneously.

**Prevent Unknown & Zero-Day Exploits**
Recursively sanitize 200+ file types and remove up to 100% of potential threats with the Deep CDR technology.

**Internet Connected & Air-Gapped Support**
Support for both online and air-gapped environments.

**Admin File Management**
File management administration via cloud and block file types according to extension. Support for encrypted and unencrypted archives.

**Central Management**
Manage and enforce policies with granular control using My OPSWAT™ Central Management (Cloud/On-premises).

**Industry-Leading Technologies**
Deep CDR, MetaScan MultiScanning, File-Based Vulnerability Assessment, Proactive DLP™, Adaptive Sandbox, Country of Origin.

**Compliance Assurance**
Assists with NERC CIP 003-7, HIPAA, SOC 2, ISO 27001, and more applicable frameworks to best monitor security controls on the endpoint.
